PROFESSIONAL SUMMARY

AI Infrastructure & Cloud Operations Lead with over 1.2 years of experience specializing in the intersection of MLOps and Cloud Architecture. Expert in deploying scalable environments across Azure, AWS, and GCP while leveraging LLMs, OCR, and Python-based automation to optimize technical workflows. Proven track record in increasing API throughput by 4x and achieving 93% precision in automated data handling. A Dean's List scholar with a deep technical foundation in Infrastructure as Code (Terraform/Ansible) and Neural Networks, dedicated to reducing operational friction through intelligent, high-performance system design.

TECHNICAL SKILLS

- **Infrastructure & Cloud:** Microsoft Azure, AWS, GCP, Windows Server, Linux, Virtualization, Terraform, Ansible, Docker.
- **AI & Automation:** PowerShell, Python, LLMs, Prompt Engineering, Power Automate, REST-API, CI/CD, MLOps.
- **Data & BI:** SQL/NoSQL (MongoDB, CouchDB), Power BI, Power Query, TensorFlow, Keras, PyTorch.
- **Development:** Node.js, Django, HTML/CSS, JavaScript, TypeScript, NextJs, C++, Java.

PROFESSIONAL EXPERIENCE

DataZymes | AI Infrastructure & Automation Intern | Oct 2024 – April 2025

- **AI-Driven Operations:** Led the implementation of AI-based monitoring and incident response workflows, significantly reducing mean time to detection for infrastructure alerts.
- **Intelligent Workflows:** Designed and deployed automated document processors using OCR and LLMs to extract metadata, achieving 93% precision in data handling.
- **Scalable Architecture:** Integrated MongoDB as a high-performance data layer to support searchable infrastructure documentation and scalable operational reporting.
- **Cost Optimization:** Leveraged Power BI and custom Python scripts to identify operational "decoupling," leading to refined resource allocation and cost savings.

TechWorks USA | Sales & Operations Analyst (Project) | Jun 2024 – Sept 2024

- **Systems Thinking:** Developed a unified Power BI dashboard using a star schema model to track revenue and profit, uncovering insights that drove regional fulfillment strategies.

Plutomen Technologies | AI Intern – Operations & Search Automation | Sept 2023 – May 2024

- **Throughput Enhancement:** Improved API throughput by 4x and reduced response time to 20ms by implementing Django caching and asynchronous parallel logic.
- **Infrastructure Testing:** Increased test coverage to 96% via unit testing and automated API testing using Postman within an Azure environment.
- **Modernization:** Developed RESTful APIs to validate and search through complex servicing documentation, streamlining high-friction operational tasks.

SELECTED PROJECTS

ImposterCreator (Deepfake Motion Transfer) | Aug 2022 – Nov 2022

- Utilized the First Order Motion Model in Jupyter Notebook to achieve a 96.4% success rate in generating realistic animations from static images.

YouMusic (Automation & Streaming) | Dec 2022 – Mar 2023

- Developed a RESTful server and web-app that reduced buffering by 87% through range request configuration and real-time caching.

EDUCATION & PUBLICATIONS

- **Postgraduate Certificate:** Cloud Computing & Administration | **Seneca Polytechnic** (Dean's List 2025)
- **Postgraduate Certificate:** AI with Machine Learning | **Humber Polytechnic** (Dean's List 2024-2025)
- **Bachelor of Computer Science** | **CHARUSAT** (Major CGPA: 8.97/10; Dean's List)
- **Publication:** "Approaches and Applications of Lane Detection for Autonomous Driving Progression," **ICSCSA**, 2024.
